

GERAKASA

FITNESS INTELLIGENCE SUPER APP

Founder Blueprint & Strategic Product Thesis

Gerakmu, Punya Arah.

Version 1.0 — Strategic Reset

27 August 2026

CONFIDENTIAL

Pernyataan Dokumen & Status Revisi

Blueprint v1.0 menggantikan thesis produk pada Gerakasa Founder Blueprint v0.2. Perubahan ini bukan sekadar penambahan fitur; ia mengubah pusat gravitasi venture dari coach-led challenge marketplace / fitness operating network menjadi Fitness Intelligence Super App dengan Personalized Fitness Journey Orchestration sebagai mekanisme inti.

Keputusan yang dikunci

Gerakasa bukan aplikasi gym, bukan library video, bukan marketplace PT, dan bukan ClassPass clone. Gerakasa adalah intelligence layer yang memahami user, menyusun journey, menentukan next best action, belajar dari progres, lalu menghubungkan user ke aktivitas, expert, tempat, perangkat, komunitas, event, dan commerce ketika relevan.

Apa yang berubah dari v0.2

Area	v0.2	v1.0
Category thesis	Fitness journey / operating network	Fitness Intelligence Super App
Wedge	Coach-led challenge/program marketplace	Adaptive fitness journey; Strength sebagai validation vertical pertama
Hero value	Program + accountability + coach	Know what to do next; intelligence yang semakin personal
AI	Leverage pendukung, consumer proposition ditunda	Core intelligence engine dengan guardrail; bukan chatbot generik
Coach	Supply utama sejak MVP	Human escalation layer; optional untuk user, penting untuk expert network
Mobile	Web/PWA dahulu	Mobile experience menjadi target produk; prototype mobile dipakai untuk alignment, build mengikuti resource
North star	Completed Active Weeks	Completed Personalized Actions / Active User / Week; MVP fokus personalized workouts
Super-app logic	Portfolio fitur dan network	Orchestration: satu profile + satu intelligence engine + banyak capability layer
Brand promise	Setiap gerak membawa asa	Gerakmu, Punya Arah.

Prinsip penggunaan dokumen

- Visi besar boleh luas; MVP harus sempit dan dapat dibuktikan.
- Layer masa depan bukan komitmen build sekarang. Setiap ekspansi memiliki validation gate.
- Klaim kompetitor adalah snapshot berdasarkan informasi publik per 27 Agustus 2026, bukan audit absolut.
- Blueprint ini adalah sumber arah strategis. PRD implementasi harus direvisi agar selaras sebelum development scope besar berikutnya.

1. Executive Summary — Bentuk Gerakasa yang Dikunci

Definisi satu kalimat

Gerakasa adalah Fitness Intelligence Super App yang memahami tujuan, konteks, aktivitas, preferensi, dan progres seseorang untuk mengorkestrasi fitness journey yang personal—serta menghubungkannya ke coach, tempat olahraga, komunitas, event, perangkat, dan produk ketika dibutuhkan.

Core promise

Consumer promise

Selalu tahu langkah fitness berikutnya.
Brand line: Gerakmu, Punya Arah.

Company thesis

Dunia fitness tidak kekurangan konten, aplikasi, trainer, gym, kelas, wearable, atau komunitas. Masalahnya adalah semuanya terfragmentasi. User tetap harus menyatukan sendiri tujuan, jadwal, progres, recovery, aktivitas, coach, data wearable, dan pilihan layanan. Gerakasa berusaha menjadi intelligence + orchestration layer di atas perjalanan itu.

Core philosophy

Journey → Data → Intelligence → Advantage

Journey menghasilkan data. Data membentuk intelligence. Intelligence menghasilkan rekomendasi dan adaptasi yang lebih relevan. Semakin lama user memakai Gerakasa, semakin kecil kebutuhan untuk “mulai dari nol” setiap kali mengambil keputusan fitness.

Tiga hal yang harus terbukti

1. User berulang kali mempercayai Gerakasa untuk menentukan next best fitness action.
2. Adaptive journey meningkatkan completion, consistency, dan perceived relevance dibanding program statis.
3. Satu intelligence architecture dapat diperluas dari Strength ke vertical kedua (Running) tanpa membangun produk terpisah dari nol.

2. Brand, Positioning, dan Category Design

Elemen	Keputusan v1.0
Brand	GERAKASA
Category / vision	Fitness Intelligence Super App
Consumer tagline	Gerakmu, Punya Arah.
Product promise	Selalu tahu langkah fitness berikutnya.
Core mechanism	Personalized Fitness Journey Orchestration
Hero engine	G-Intelligence

Elemen	Keputusan v1.0
Hero daily experience	G-Today
Path layer	G-Journey
Internal classification	G-Taxonomy
Discovery surface	G-Hub / Explore Gerakasa
Universal command	Tanya Gerakasa

Positioning statement

Platform lain dapat membantu user menemukan workout, trainer, atau tempat olahraga. Gerakasa berusaha membantu user menentukan apa yang sebaiknya dilakukan berikutnya berdasarkan konteks dirinya sendiri—lalu menghubungkan user ke bantuan yang tepat ketika dibutuhkan.

Apa yang tidak boleh menjadi positioning utama

- “AI fitness app” saja — terlalu mudah dikomoditaskan dan sudah ramai.
- “Marketplace PT” — mengunci Gerakasa pada jasa manusia dan supply marketplace.
- “ClassPass Indonesia” — menempatkan diferensiasi pada inventory, bukan intelligence.
- “Fitness content premium” — berhadapan langsung dengan konten gratis yang sangat melimpah.
- “Super app dengan fitur paling banyak” — breadth tanpa orchestration hanya menambah decision fatigue.

3. Visi, Misi, dan 5W + 1H

Visi 10 tahun

Menjadi Fitness Intelligence Super App paling dipercaya di Indonesia: sistem yang membantu setiap orang memahami fitness journey-nya, mengambil keputusan yang lebih personal, dan terhubung ke ekosistem fitness yang relevan dalam satu pengalaman yang sederhana.

Misi

- Mengubah kompleksitas dunia fitness menjadi langkah harian yang jelas dan relevan.
- Membantu user menemukan goal ketika belum memilikinya, bukan hanya mengeksekusi goal yang sudah jelas.
- Membangun adaptive journey lintas aktivitas, bukan program one-size-fits-all.
- Menggabungkan AI intelligence dengan human expertise ketika konteks membutuhkan manusia.
- Menghubungkan pengalaman digital dengan aktivitas nyata: coach, gym, studio, court, class, event, dan community.
- Membuat data fitness dapat dipahami sebagai insight dan action, bukan sekadar dashboard angka.
- Membangun ecosystem economics yang memberi manfaat nyata bagi user, coach, venue, event organizer, dan partner.

5W + 1H Gerakasa

Pertanyaan	Jawaban
WHAT	Fitness Intelligence Super App dengan Personalized Fitness Journey Orchestration.

Pertanyaan	Jawaban
WHY	Karena pilihan dan data fitness berlimpah tetapi terfragmentasi; user tetap bingung menentukan next best action dan menjaga continuity.
WHO	Awal: beginner-intermediate Indonesia yang ingin lebih fit tetapi tidak memiliki PT tetap. Jangka panjang: berbagai goal, modality, dan life stage.
WHEN	Sekarang sebagai venture discovery → adaptive Strength MVP → horizontal expansion setelah evidence.
WHERE	Digital-first Indonesia; discovery dan partnership awal dapat dimulai di Jabodetabek, sementara produk digital dapat diuji lintas kota.
HOW	Fitness Profile + G-Taxonomy + G-Intelligence → G-Journey → G-Today → Action → Track → Learn → Adapt; capability lain muncul secara kontekstual.

4. Problem Thesis — Kompleksitas Tanpa Arah

Masalah inti

User modern dapat menemukan hampir semua komponen fitness secara terpisah: tutorial di social media, program di aplikasi, running data di wearable, gym lewat membership, PT lewat chat, kelas lewat booking platform, event lewat ticketing, dan gear lewat marketplace. Tetapi tidak ada continuity yang menjamin seluruh keputusan itu membentuk satu journey personal.

Problem tree v1.0

Lapisan	Pain yang dirasakan	Akar masalah
Start	“Gue mau lebih fit, tapi nggak tahu mulai dari mana.”	Goal discovery lemah; terlalu banyak pilihan.
Choice	“Program mana yang cocok buat gue?”	Konteks pribadi tidak ikut memfilter pilihan.
Action	“Hari ini harus ngapain?”	Program statis tidak sensitif ke waktu, recovery, dan perubahan kondisi.
Consistency	Semangat awal tinggi lalu drop.	Tidak ada adaptive feedback loop dan friction terlalu besar.
Progress	Banyak angka tetapi tidak paham artinya.	Tracking ≠ intelligence.
Fragmentation	Gym, run, yoga, wearable, coach ada di app berbeda.	Tidak ada unified fitness profile / journey layer.
Expert access	PT mahal atau tidak dibutuhkan setiap saat.	Pilihan sering binary: self-guided vs full PT.
Physical access	Venue/class tersebar dan sistem berbeda.	Supply discovery & booking terfragmentasi.

Jobs to be Done utama

- Ketika saya belum punya goal, bantu saya menemukan arah tanpa onboarding yang melelahkan.
- Ketika saya punya goal, susun journey yang realistis berdasarkan kondisi dan preferensi saya.
- Ketika saya membuka app, beri tahu apa yang relevan dilakukan hari ini dan mengapa.
- Ketika hidup saya berubah, adaptasikan journey tanpa membuat saya menyusun ulang semuanya.
- Ketika progress berubah, jelaskan maknanya dan tindakan berikutnya.
- Ketika AI tidak cukup, hubungkan saya ke expert yang tepat tanpa memindahkan seluruh journey ke tempat lain.

5. User States, Entry Modes, dan Personas

Empat intent states

State	Mindset	Experience Gerakasa
Explorer	Cuma iseng / lihat-lihat	Low-friction discovery, quick activities, Surprise Me, trending, social challenge.
Goal Discovery	Pengen lebih fit tapi belum tahu target	7-day discovery / preference learning → suggested journey.
Active Journey	Sudah punya goal	Personal journey, Today plan, tracking, adaptation.
Multi-Journey	Punya beberapa goal / modality	Gerakasa mengatur prioritas dan benturan antarjourney.

Tiga pintu masuk produk

Mode	Pertanyaan user	Gerakasa menjawab
Purpose	“Aku tahu mau apa.”	Bangun Journey.
Discovery	“Bantu aku cari arah.”	Eksplorasi → learn preference → rekomendasikan Journey.
Experience	“Aku cuma mau coba.”	Quick activity / challenge → pelajari behavior → tawarkan Journey.

Primary MVP persona

Beginner–intermediate user usia dewasa muda yang ingin fat loss, build strength, atau general fitness; latihan sendiri; tidak memiliki PT tetap; sering mengambil program dari internet; dan membutuhkan arahan yang terasa personal serta konsisten.

Secondary personas jangka panjang

- Runner dengan target race dan supporting strength/recovery.
- User yang fokus wellness: mobility, stress, sleep, mindful movement.
- User multi-sport: gym + running + padel/cycling.
- Specialized journey users seperti prenatal/postpartum — hanya dengan expert-governed rules.
- Coach/expert yang ingin mengelola client secara lebih efisien.
- Venue/studio/event organizer yang ingin demand dan capacity lebih terorkestrasi.

6. G-Taxonomy — Cara Gerakasa Memahami Dunia Fitness

G-Taxonomy adalah sistem klasifikasi internal, bukan menu utama user. Ia mencegah Gerakasa mencampur goal, activity, life stage, support need, dan environment sebagai kategori yang setara.

Lima dimensi G-Taxonomy

Dimensi	Pertanyaan	Contoh
G-Goal	Kenapa user bergerak?	General fitness; strength/muscle; body composition; endurance; performance; mobility; mental wellbeing; event/achievement.
G-Move	Bagaimana user bergerak?	Strength; running; cycling; yoga; padel; swimming; calisthenics; dance; combat; team sports; outdoor.
G-Context	Siapa user dalam konteks sekarang?	Beginner; returning; busy professional; home-only; athlete; prenatal; postpartum; older adult; limitation.
G-Support	Bantuan apa yang diperlukan?	Self-guided; AI-guided; coach; nutrition; recovery; community; venue; equipment; event.
G-Environment	Di mana dan dengan apa?	Home; gym; outdoor; studio; court; device/wearable; equipment availability; schedule.

12 activity verticals G-Move

#	Vertical	Subkategori contoh
1	Strength & Resistance	Gym, bodybuilding, powerlifting, machine/free-weight strength
2	Functional & Bodyweight	Calisthenics, HIIT, functional, circuit
3	Running & Walking	Walking, jogging, road running, trail running
4	Cycling	Indoor cycling, road, casual cycling
5	Aquatic	Swimming, aqua fitness
6	Mindful Movement	Yoga, Pilates, barre
7	Mobility & Flexibility	Stretching, mobility, movement quality
8	Dance & Cardio	Zumba, aerobic, dance fitness
9	Racquet Sports	Padel, badminton, tennis, pickleball
10	Team Sports	Football, futsal, basketball, volleyball
11	Combat & Martial Arts	Boxing, Muay Thai, martial arts, combat fitness
12	Outdoor & Adventure	Hiking, trekking, trail/outdoor recreation

Cara taxonomy menghasilkan Journey

Contoh: First 10K

G-Goal: Finish First 10K + G-Move: Running + G-Context: Beginner + G-Environment: Outdoor/Gym + G-Support: AI-guided → Journey dapat berisi Running sebagai primary modality, Strength sebagai support, Mobility sebagai recovery, dan rest/recovery rules.

Contoh: Active Pregnancy

Pregnancy adalah G-Context, bukan “jenis olahraga”. Journey hanya menggunakan approved modalities dan expert-governed templates. Free-form generative prescription tidak diperbolehkan untuk domain sensitif.

7. Product Architecture — Layer Gerakasa yang Final

Arsitektur v1.0 membedakan antara engine, consumer surfaces, capability layers, dan professional products. Tujuannya: super app terlihat luas saat dieksplorasi, tetapi pengalaman harian tetap sederhana.

A. Intelligence & Knowledge Core

Produk / Layer	Peran	Sub-komponen utama
G-Intelligence	Otak keputusan dan orchestration	User model; context engine; recommendation engine; adaptation rules; explanation layer; safety guardrails; journey conflict resolution; next-best-action; personalization memory.
G-Taxonomy	Ontology / classification layer	G-Goal; G-Move; G-Context; G-Support; G-Environment; tagging; compatibility rules; lifecycle/versioning.
Fitness Graph	Unified longitudinal profile	Goals; activity history; preferences; performance; feedback; coach interactions; connected data; milestones; consented context.

B. Consumer Core Surfaces

Produk	Consumer question	Sub-komponen utama
G-Today	“Apa yang harus kulakukan sekarang?”	Today card; readiness/context; primary action; supporting actions; Why This Today; quick reschedule; time-constrained option; completion feedback.
G-Journey	“Aku sedang menuju ke mana?”	Journey discovery; journey templates; active journey; week plan; primary/support modality; multi-journey priority; adapt/reschedule; milestone.
G-Hub / Explore	“Ada apa di Gerakasa?”	Recommended for You; G-Move catalog; G-Wellness; coach; access; events; community; market; trending journeys; categories.

Produk	Consumer question	Sub-komponen utama
Fitness IQ	“Bagaimana perkembanganku?”	Overall score/summary; consistency; strength; endurance; recovery; trends; weekly insight; next focus; explainable recommendations.
Me / Fitness Profile	“Gerakasa tahu apa tentangku?”	Goals; preferences; schedule; equipment; contexts; connected devices; consent; coach; privacy controls; journey history.
Tanya Gerakasa	Universal command surface	Search + intent; modify today; find activity; explain insight; discover coach/place/event; constrained Q&A.

C. Capability Layers

Layer	Apa isinya	Monetization potential
G-Move	Strength, running, cycling, yoga, padel, swimming, calisthenics, dance, combat, team sport, outdoor, classes.	Premium journeys, partner classes, vertical programs.
G-Wellness	Recovery, sleep, mobility, stretching, breathing, mindfulness, hydration, general nutrition guidance.	Gerakasa+, expert services, partner offerings.
G-Coach	Coach matching, expert profiles, form review, quick consult, online coaching, offline PT, specialist escalation.	Take rate / service fee; later subscription bundles.
G-Access	Gym, studio, court, classes, capacity, booking, passes/credits, nearby discovery.	Booking fee / revenue share / partner acquisition.
G-Connect	Wearables, smart scale/ring/watch, health platforms, data normalization, permission center.	Retention; Gerakasa+ premium intelligence; partner integrations.
G-Community	Friends, clubs, feed-lite, challenges, streak, leaderboard, points, rewards, accountability.	Sponsorship, premium community, acquisition loops.
G-Events	Race, ride, expo, workshop, community session, registration, ticket, QR check-in, organizer tools.	Ticket/service fee, organizer fee, sponsorship.
G-Market	Gear, apparel, equipment, curated supplements, digital products, journey-relevant recommendations.	Marketplace commission, affiliate, featured placement with guardrails.

D. Professional / Business Products

Produk	Target	Sub-komponen utama
Gerakasa Pro	Coach / expert / studio operator	Client roster; program builder; schedule; progress review; messaging; payment/payout; AI copilot; forms; analytics; content/program library.
Gerakasa Partner	Venue / event / merchant	Inventory/capacity; booking; offers; event management; payout; analytics; partner CRM-lite; campaigns.

Produk	Target	Sub-komponen utama
Gerakasa Business	Company / HR	Corporate challenge; employee activity; wellbeing campaign; team dashboard; rewards; privacy-safe aggregate reporting.

E. Cross-layer system services

- Identity & consent
- Payment, wallet/credits when validated
- Notification & reminders
- Trust / credential / review graph
- Safety policy engine
- Search and discovery
- Analytics & experimentation
- Support, moderation, incident handling

8. How the System Works — Personalized Journey Orchestration

Core loop

Understand → Recommend → Act → Measure → Learn → Adapt

Gerakasa tidak berhenti pada “generate program”. Nilai muncul ketika sistem menggunakan hasil aktivitas nyata untuk mengubah keputusan berikutnya.

Decision flow

1. User masuk lewat Purpose, Discovery, atau Experience mode.
2. Gerakasa membangun Fitness Profile minimum dan memetakan sinyal ke G-Taxonomy.
3. G-Intelligence memilih atau menyusun G-Journey yang dapat dijelaskan alasannya.
4. G-Today mengambil bagian journey yang relevan untuk hari tersebut.
5. User melakukan action: workout, run, walk, recovery, class, consult, dll.
6. Hasil, feedback, dan context baru masuk ke Fitness Graph.
7. G-Intelligence memperbarui rekomendasi, intensity, schedule, atau support layer.
8. Ketika risk/complexity melewati guardrail, sistem mengeskalisasi ke human expert atau meminta user mencari bantuan profesional yang sesuai.

Personalization depth

Level	Apa yang dipersonalisasi	Contoh
1. Selection	Pilihan journey/activity	Pemula dengan goal strength → starter strength journey.
2. Planning	Schedule, duration, volume, modality mix	User hanya punya 3 hari dan 30 menit → plan disusun ulang.
3. Adaptation	Plan berubah karena hasil dan feedback	Workout terlalu berat / recovery turun → intensity atau modality diubah.

Level	Apa yang dipersonalisasi	Contoh
4. Orchestration	Beberapa journey dan capability dikoordinasikan	10K + muscle gain → running, lower-body volume, mobility, recovery diseimbangkan.
5. Human escalation	Expert masuk ketika diperlukan	Plateau, form review, complex goal, specialized context.

Declared vs observed personalization

Sinyal	Contoh	Nilai
Declared	User bilang suka running, tersedia 4 hari, goal 10K.	Starting context.
Behavioral	Running sering skip, strength completion tinggi.	Preferensi nyata > klaim onboarding.
Performance	Pace/volume/strength berubah.	Adaptation signal.
Context	Waktu tersedia, equipment, travel, recovery.	Daily relevance.
Feedback	Too easy / just right / too hard / dislike.	Learning loop.

9. Mobile Information Architecture & Vision UI

Bottom navigation

Tab	Pertanyaan yang dijawab	Isi utama
Today	Apa yang harus kulakukan?	Personalized next action.
Journey	Aku sedang menuju ke mana?	Goal/path/week plan.
Explore	Ada apa lagi?	G-Hub: seluruh ecosystem secara curated.
Fitness IQ	Bagaimana perkembanganku?	Progress + insight.
Me	Siapa aku di mata sistem?	Profile, preference, connections, privacy.

Dua wajah UI

- Personalized Face: Today, Journey, Fitness IQ — sederhana dan konteks-first.
- Super App Face: Explore / G-Hub — memperlihatkan breadth Gerakasa tanpa memenuhi home dengan katalog.

Prinsip UI

- Complexity lives in the system, not on the screen.
- Home tidak category-centric. Jenis olahraga tampil jelas di Explore/G-Move, bukan memaksa user memilih sendiri setiap hari.
- Tanya Gerakasa adalah compact command surface, bukan chatbot yang mengambil alih seluruh UI.

- Future products harus contextual: G-Coach muncul ketika expert help relevan; G-Access muncul ketika user butuh tempat; G-Market muncul ketika journey membutuhkan produk.

10. Core Product Experiences

G-Today — Hero Experience

Target experience: user membuka app dan dalam beberapa detik tahu apa yang relevan dilakukan hari itu. G-Today harus menjadi alasan utama user kembali, bukan Explore catalog.

- Primary action card
- Duration/intensity
- Readiness/context summary
- Why this today?
- Supporting action: steps/mobility/recovery
- Quick adapt: “cuma punya 15 menit”
- Completion + feedback

G-Journey — The Path

- Goal-based journey templates
- Discovery journey untuk user tanpa goal
- Primary vs supporting modality
- Weekly plan
- Milestones
- Multi-journey conflict rules
- Adaptive rescheduling
- Expert-governed specialized journeys

Fitness IQ — Intelligence Made Visible

- Progress summary yang mudah dipahami
- Consistency
- Strength / endurance indicators
- Recovery readiness
- Weekly trends
- One actionable insight
- Recommended next focus
- Explanation / confidence level

G-Coach — AI-first, Human When Needed

Product principle

No user should need a personal trainer to benefit from Gerakasa. Human coaching enhances and escalates the experience; it does not unlock the core value.

- Quick consult / coach minutes
- Form review
- Program review
- Online coaching
- Offline PT
- Running/yoga/strength/etc expert types

- Coach matching berdasarkan journey + context

11. Free User Experience & Monetization Ladder

Free tier philosophy

Free tidak boleh terasa seperti demo rusak. User tanpa uang lebih tetap harus mendapatkan real value: starter journey, Today plan, guided activity, basic tracking, dan basic adaptation. Monetisasi datang dari depth, convenience, expert help, dan ecosystem transactions.

Tier / Stream	User value	Revenue hypothesis
Gerakasa Free	Starter profile; basic journey; Today; guided activity; basic progress/adaptation.	Acquisition + habit + consented learning signals.
Gerakasa+	Advanced adaptation; deeper Fitness IQ; multi-journey; advanced insights; premium journeys; richer Connect.	Consumer subscription.
Coach Services	Form review; quick consult; online/offline coaching.	Take rate / service fee.
Gerakasa Pro	Coach/client OS + AI copilot.	Professional SaaS.
G-Access	Gym/studio/court/class booking.	Booking fee / revenue share.
G-Events	Registration, ticket, QR pass.	Ticket/service fee + organizer tools.
G-Community Rewards	Challenges, rewards, sponsored missions.	Brand sponsorship / premium challenges, with clear ad labeling.
G-Market	Journey-relevant products.	Commission / affiliate / seller fee.
Gerakasa Business	Corporate wellness orchestration.	B2B subscription / per-seat contract.

Pricing principle

- Tidak menetapkan harga final sebelum willingness-to-pay experiment.
- Subscription tidak boleh mengunci basic fitness utility.
- Coach transaction harus memberi economics yang masuk akal bagi expert.
- Credit model untuk Access adalah future hypothesis, bukan MVP assumption.

12. Competitive Landscape — Snapshot 27 Aug 2026

Gerakasa tidak masuk pasar kosong. Beberapa kompetitor sudah sangat kuat pada satu atau dua layer. Strategi harus menghormati kekuatan mereka dan menghindari klaim “pertama” yang tidak dapat dibuktikan.

Competitive positioning matrix

Platform	Core strength publik	Personalization	Physical / service ecosystem	Orchestration breadth	Implication for Gerakasa
Fitbod [C1]	Adaptive strength programming; recovery, history, equipment; 400M+ logged workouts cited by Fitbod.	Sangat kuat untuk strength.	Terbatas; bukan marketplace venue/coach.	Fokus strength/workout intelligence.	Jangan bersaing sebagai “AI workout generator”. Menang lewat cross-modality + local ecosystem + human/service layer.
Freeletics [C2]	Coach journey yang menyesuaikan performance & feedback; free + paid Coach.	Kuat untuk digital coaching.	Terbatas pada digital fitness.	Multi-modality tetapi tetap training-centric.	Gerakasa harus lebih kuat dalam orchestration lintas physical ecosystem dan local expert network.
Runna [C3]	Personalized running plans berdasarkan level, schedule, goal; tracking dan supporting strength/recovery.	Sangat kuat untuk running.	Terbatas; bukan super-app local access.	Kuat dalam running journey.	Vertical specialists akan selalu lebih dalam. Gerakasa harus mengorkestrasi beberapa vertical tanpa menurunkan kualitas.
GOFIT.ai [C4]	Local AI personalization, progress, rest, nutrition cues, gamification.	Kuat sebagai positioning AI local.	Belum menjadi public core strength.	Healthy lifestyle / AI breadth.	Gerakasa tidak bisa mengklaim AI personalization sebagai unique moat; perlu journey orchestration + ecosystem execution.
FIT HUB [C5]	Large owned gym network, membership, class booking, PT purchase/tutorial through app.	Personalization dalam konteks fitness club/PT.	Sangat kuat pada owned physical network.	Berpusat pada ecosystem FIT HUB.	Gerakasa jangan mengganti gym app; menjadi user-centric layer lintas provider dan aktivitas.
DOOgether [C6]	Indonesia venue/class/court discovery and booking; 200+ active venues, 50+ areas, 10K+ classes/month shown publicly.	Bukan core positioning.	Kuat pada local booking.	Broad discovery, class & sports access.	Gerakasa Access harus memberi contextual demand, bukan hanya katalog/inventory.
STRONGBEE [C7]	Trainer, gym, class, court, professional, event booking; broad sports directory.	Bukan core positioning.	Kuat pada local service/venue breadth.	Marketplace/service breadth.	Gerakasa harus membuat journey & intelligence sebagai alasan utama; marketplace adalah capability layer.
ClassPass [C8]	30k+ partners globally; credit-based booking, wellness, open-capacity monetization.	Limited as training orchestration.	Sangat kuat pada global inventory & credits.	Booking/wellness breadth.	Jangan menjadikan credit/access sebagai wedge; gunakan access setelah user journey dan demand signal terbentuk.

Legend / note

Matrix di atas menilai public positioning dan fitur yang dapat diverifikasi dari sumber publik. “Tidak core” tidak berarti fitur sama sekali tidak ada. Setiap competitor dapat berubah cepat.

13. Competitive Advantage — Apa yang Bisa Menjadi Kekuatan Gerakasa

Bukan keunggulan yang cukup

- Punya AI.
- Punya lebih banyak video.
- Punya banyak kategori olahraga.
- Punya PT marketplace.
- Punya credit booking.
- Punya dark premium UI.

Competitive advantage stack

Advantage hypothesis	Mengapa bernilai	Kapan menjadi moat
Journey orchestration	Menggabungkan goal, modality, support, dan context menjadi satu path.	Product advantage sejak awal jika execution bagus.
Adaptive next-best-action	User tidak perlu mengatur ulang setiap hari; system learns from results.	Retention advantage setelah cukup behavior data.
Cross-modality Fitness Graph	Satu longitudinal context untuk strength, run, wellness, coach, access, etc.	Data/context moat jangka menengah—dengan consent/privacy.
AI + Human escalation	Automation untuk everyday; expert ketika nuance diperlukan.	Service quality + network moat ketika supply berkualitas tumbuh.
Local ecosystem orchestration	Coach, venue, event, class, market muncul saat relevan dengan journey.	Network/density moat setelah supply & demand lokal terkumpul.
Gerakasa Pro workflow	Coach mengelola client di dalam system, bukan sekadar menerima lead.	Workflow lock-in + supply loyalty.
Trust & governance graph	Credential, review, completion, incidents, quality rules.	Trust moat setelah transaksi dan outcome terakumulasi.

Unfair advantage loop

Untuk user

Semakin lama user menggunakan Gerakasa, semakin banyak context yang tidak perlu diulang. Journey menjadi lebih personal dan keputusan menjadi lebih cepat.

Untuk company

Dengan consent yang benar, interaction history, taxonomy mapping, quality signals, dan network behavior dapat membuat orchestration semakin sulit direplikasi hanya dengan menambah chatbot AI.

Formula moat jangka panjang

Personalization Data × Coach Network × Fitness Network × Workflow Lock-in

AI model bukan moat utama. Moat dibangun dari context, network, quality, execution, dan habit yang terakumulasi.

14. MVP v1 — Gerakasa Intelligence / Strength Validation Vertical

MVP question

Pertanyaan tunggal

Will users repeatedly trust Gerakasa to tell them what workout they should do next?

Mengapa Strength dahulu

- Input/output jelas: exercise, set, rep, load, duration.
- Progression dan feedback mudah diukur.
- Adaptive loop dapat diuji tanpa ketergantungan partnership venue.
- User beginner/intermediate mudah ditemukan untuk validation.
- Architecture dapat diuji sebelum ekspansi ke Running sebagai vertical kedua.

In-scope MVP

Module	Scope minimum
Onboarding / Discovery	Goal, level, schedule, location/equipment, time, preferences, basic limitations, explore mode.
Fitness Profile	Minimal profile + preference + consent.
G-Journey	1 active Strength/general fitness journey; weekly plan.
G-Today	Today workout, duration/intensity, Why This Today, quick time adjustment.
Guided Workout	Exercise demo/reference, sets, reps, load/RPE, rest, swap, completion.
Feedback	Too easy / just right / too hard; discomfort flag; liked/disliked.
Adaptation	Next workout changes using history + feedback + rule-based/AI-assisted logic.
Fitness IQ Basic	Consistency, strength trend, workout completion, one weekly insight.
Coach Escalation Lite	Concierge request for form/program review; can be manually fulfilled.
Analytics	Recommendation shown → accepted → completed → feedback → next plan.

Explicitly out of MVP

- Full ClassPass-style credits
- Large gym/studio marketplace
- Padel booking
- Event marketplace
- Social feed
- Full wearable integrations
- G-Market
- Corporate wellness
- Prenatal/postpartum/rehab journeys
- Nutrition diagnosis / clinical advice
- Hundreds of premium videos
- Fully autonomous generative coach

MVP success metrics

Metric	Why it matters
Completed Personalized Workouts / Active User / Week	Core value actually completed.
Recommendation Acceptance Rate	Apakah user percaya Today recommendation.
Workout Completion Rate	Apakah plan realistis.
Adaptation Acceptance	Apakah perubahan terasa relevan.
Week-4 Retention	Apakah intelligence membangun habit.
Perceived Personal Relevance	Survey: “plan feels made for me.”
Safety / discomfort incident rate	Guardrail quality.

15. Expansion Sequence — Dari Vertical ke Super App

Phase	Proof required	Product expansion
Phase 0 — Discovery	Problem resonance; prototype comprehension.	G-Taxonomy; G-Intelligence concept; UX prototype.
Phase 1 — Strength MVP	Repeated usage + adaptive loop.	G-Today, G-Journey, guided Strength, Fitness IQ Basic.
Phase 2 — Horizontal proof	Architecture works beyond Strength.	Running vertical + strength-for-runners + recovery orchestration.
Phase 3 — Human layer	User requests expert help; supply quality.	G-Coach + Gerakasa Pro light.
Phase 4 — Data + community	Retention and data value justify complexity.	G-Connect + G-Community challenges/rewards.
Phase 5 — Physical ecosystem	Local demand density.	G-Access + G-Events pilots.
Phase 6 — Commerce	Journey-driven purchase intent.	G-Market + partner commerce.
Phase 7 — Enterprise	Consumer engagement / operational proof.	Gerakasa Business.

Specialized journeys gate

Prenatal, postpartum, older adult, injury/rehab, and other higher-risk contexts enter only after expert governance, content approval, escalation paths, consent, and scope boundaries are operational. Gerakasa must never disguise clinical guidance as generic AI fitness advice.

16. Business Model Architecture

Revenue flywheel

Free habit → Premium intelligence → Expert transaction → Physical access → Commerce → B2B

Tidak semua revenue stream diluncurkan bersama. Urutan monetisasi harus mengikuti product-market evidence dan density.

Revenue streams & unit economics questions

Stream	Buyer	Core question before launch
Gerakasa+	Consumer	Apakah deeper intelligence cukup bernilai untuk subscription?
Coach take rate	Consumer / coach	Apakah Gerakasa menghasilkan qualified demand dan admin leverage?
Gerakasa Pro SaaS	Coach / expert	Apakah workflow menghemat waktu dan meningkatkan client capacity?
Access fee / rev share	Venue / user	Apakah Gerakasa membawa incremental demand tanpa merusak direct membership?
Event fee	Organizer / attendee	Apakah discovery + ticketing + community menambah conversion?
Marketplace commission	Seller / buyer	Apakah rekomendasi journey meningkatkan conversion tanpa merusak trust?
Sponsored challenges	Brand	Apakah sponsorship relevan dan transparan, bukan spam?
Gerakasa Business	Company	Apakah engagement dan aggregate outcome cukup bernilai untuk B2B?

17. Validation Plan — Market Signal vs Market Validation

Current signal

Per 27 Agustus 2026, 32 orang telah mengisi G-Form dengan antusias untuk terlibat dalam Gerakasa. Ini adalah early signal bahwa visi dan problem space terasa resonan bagi talent/calon collaborator. Ini belum sama dengan product-market fit, willingness-to-pay, atau retention validation.

Validation ladder

Level	Bukti	Status / next
Vision resonance	Orang tertarik terlibat / berdiskusi.	Early positive signal.
Problem validation	Pain muncul berulang tanpa leading question.	Wajib dilakukan melalui interview.
Solution validation	Prototype dipahami; user memilih Gerakasa flow.	Usability/prototype test.
Behavior validation	User kembali dan menyelesaikan recommended actions.	Closed alpha.
Payment validation	Subscription / coach service / transaction willingness.	Experiment setelah value terbukti.
PMF signal	Retention, pull, referrals, repeated value.	Belum diklaim.

Minimum discovery sample

- 20+ calon user dari beberapa fitness maturity level.
- 10+ PT/coach/expert.
- 5+ gym/studio/venue untuk memahami supply economics.
- Gunakan sebagian candidate calls sebagai discovery tambahan, bukan sebagai satu-satunya bukti demand.

Pertanyaan discovery yang harus diutamakan

- Ceritakan fitness routine kamu sekarang—tanpa menawarkan Gerakasa dulu.
- Aplikasi/tools apa yang kamu pakai dan kenapa?
- Bagian paling ribet / paling sering bikin berhenti apa?
- Kapan terakhir kali bingung menentukan workout/aktivitas?
- Apa yang kamu lakukan ketika plan bentrok dengan hidup nyata?
- Kalau punya assistant fitness, satu keputusan apa yang paling ingin tidak perlu kamu pikirkan sendiri?

18. Founding Team & Operating Model

Core team target

Role	Primary ownership
Founder / CEO / Product	Vision, product thesis, prioritization, integration, recruitment, company-level decisions.
CTO / Technical Cofounder	Architecture, engineering quality, delivery, security, developer workflow.
Fitness / Sports Science Lead	Programming principles, taxonomy quality, safety boundary, expert network.
Business & Partnerships	Coach/venue/brand partnerships, economics, monetization experiments.
Growth & Community	Acquisition, content, referral, challenge/community experiments.

Role	Primary ownership
Founder Associate / Strategy & Ops — optional	Meeting documentation, decision log, recruitment ops, research, follow-up, coordination.

Applicant funnel

32 applicants should be treated as a talent pool, not an instant team.

Stage	Target	Output
G-Form screening	32	A/B/C segmentation; score by capability, commitment, chemistry, conviction.
Founder intro call	10–12	Motivation, judgment, skepticism, availability, ownership fit.
Role deep dive	6–8	Role-specific thinking and mini-case discussion.
Founding Sprint 7–14 days	4–7	Real output, reliability, collaboration, disagreement quality.
Core team	4–6	Clear ownership + founder agreement / role agreement as appropriate.

Leadership principle

Founder role

Founder tidak perlu menjadi engineer, fitness expert, atau business operator terbaik. Founder harus menjadi pemegang context, direction, judgment, integration, dan accountability—serta memastikan perusahaan menemukan jawaban yang benar melalui orang yang tepat.

19. Technology Implications & PRD Alignment

Current implementation baseline to preserve

- Next.js + TypeScript strict + pnpm.
- Supabase local/migrations/types with deny-by-default RLS principles.
- Modular monolith while the domain is still evolving.
- Environment validation, secret boundary, logging discipline, tests/build gates already established.

What must change in the PRD

- Replace coach-led challenge marketplace as the product center.
- Model Fitness Profile, Journey, Daily Action, Workout Session, Feedback, Adaptation, Fitness IQ as first-class domains.
- Represent G-Taxonomy as versioned domain data, not hardcoded UI categories.
- Define recommendation/adaptation event schema and explanation fields.
- Keep coach/venue/event/market as extensible modules, not MVP dependencies.
- Add consent-aware Fitness Graph data model and strict scope boundary for sensitive/specialized contexts.

AI architecture principle

Use deterministic/rule-based logic where safety and progression rules are clear; use AI for ranking, explanation, summarization, intent, and bounded recommendation where it can be evaluated. “AI” must not become an excuse for opaque or clinically unsafe decisions.

20. Safety, Privacy, and Expert Governance

Safety-by-scope

- General fitness ≠ clinical diagnosis/treatment.
- Discomfort/pain flags trigger modification/stop/escalation rules rather than generative certainty.
- Prenatal/postpartum, rehab, medical conditions, older adults, and other special populations require curated expert governance.
- No body-shaming, guaranteed transformation, or unsafe supplement claims.

Data principles

- Collect the minimum context necessary for the feature.
- Separate public profile, private identity, and sensitive fitness/health context.
- Explicit consent for connected devices and data sources.
- User can inspect and revoke connected data permissions.
- Do not use sensitive fitness/health data for unexpected ad targeting.
- Fitness Graph is valuable only if trust and privacy are stronger than its convenience.

21. Growth Loops & Retention Mechanics

Core retention loop

Better action → more completion → richer context → better intelligence → stronger trust → repeat

The product should feel increasingly personalized, not increasingly complicated.

Growth loops

Loop	Mechanism
Journey outcome loop	Progress milestone → shareable proof → referral.
Challenge loop	Friend invite → low-friction join → activity → profile discovery → journey.
Coach loop	Coach brings clients → clients use Gerakasa → coach gets workflow value → more coach supply.
Community loop	Clubs/challenges create accountability and recurring usage.
Access loop	Journey generates contextual venue demand → partner capacity → more relevant local options.
Event loop	Journey goal → relevant event → registration → training journey → post-event next goal.

Loop	Mechanism
Commerce loop	Journey context → relevant gear need → trusted purchase → better journey execution.

22. 90-Day Strategic Roadmap v1.0

Window	Primary objective	Deliverables / gate
Day 1–14	Align thesis + team selection	Blueprint v1.0; applicant screening; 10–12 calls; 20 user interviews plan; prototype narrative.
Day 15–30	Problem + solution validation	User/coach interviews; mobile clickable prototype; final Strength MVP scope; measurement plan.
Day 31–60	Build closed-alpha core loop	Profile → Journey → Today → guided workout → feedback → adaptation → Fitness IQ Basic.
Day 61–90	Closed alpha + evidence	50–100 target testers as practical range; weekly usage; adaptation tests; usability; safety review; decision memo.

Day-90 decision

- Proceed: repeated completion + user trust + adaptive relevance signal.
- Narrow/pivot: engagement exists but next-best-action value unclear.
- Pause: users do not return or prefer existing tools without meaningful pain.

23. Founder Dashboard & Decision Rules

Weekly founder dashboard

Area	Question
User	Apakah user kembali karena Gerakasa membantu mengambil keputusan?
Product	Bagian journey mana yang paling sering diterima, diubah, atau di-skip?
Intelligence	Apakah adaptation meningkatkan relevance/completion?
Safety	Ada discomfort, unsafe recommendation, atau confusion?
Team	Siapa yang mengambil ownership dan menghasilkan output?
Business	Apa willingness-to-pay / partner economics signal terbaru?
Focus	Apa satu hal yang harus TIDAK dibangun minggu ini?

Decision hierarchy

1. User safety & trust

2. Evidence of repeated value
3. Retention / habit
4. Product simplicity
5. Unit economics
6. Breadth / expansion

24. Risks & Anti-Patterns

Risk	Gejala	Mitigation
Super-app bloat	Semua layer masuk MVP.	Stage gates; capability layer only after core loop proof.
AI gimmick	Chatbot banyak bicara, recommendation tidak dipercaya.	Measure acceptance/completion; explain why; bounded AI.
Personalization theater	Onboarding panjang, output tetap generic.	Observed behavior + feedback + adaptation.
Category confusion	Goal, sport, life-stage dicampur.	G-Taxonomy.
Marketplace trap	Tim mengejar jumlah partner sebelum demand.	Journey-first; contextual Access later.
Coach dependency	User harus bayar PT untuk dapat value.	AI-first / self-guided core.
Unsafe expansion	Prenatal/rehab dibuka terlalu cepat.	Expert-governed gates.
Founder/team chaos	Terlalu banyak anggota tanpa ownership.	4–6 core team; sprint selection; clear RACI.

25. Final Founder Thesis

GERAKASA

Fitness Intelligence Super App.
Gerakmu, Punya Arah.

Gerakasa tidak mencoba memenangkan industri fitness dengan memiliki menu terbanyak. Ia mencoba menjadi sistem yang paling berguna ketika user bertanya: “Apa langkah terbaik buat gue sekarang?”

Super App adalah hasil dari orchestration yang berhasil, bukan titik awal development. G-Intelligence harus membuktikan value melalui G-Journey dan G-Today; capability lain hanya masuk ketika journey memerlukannya.

North-star narrative

Journey → Data → Intelligence → Advantage

Your journey becomes data. Your data becomes intelligence. Your intelligence becomes an advantage.

What we build first

Strength-based adaptive fitness journey that learns from user behavior and tells the user what to do next. Running is the recommended second vertical to prove horizontal architecture.

What success looks like

User tidak berkata “Gerakasa punya banyak fitur.” User berkata: “Gerakasa ngerti gue; tiap buka, gue tahu apa yang perlu dilakukan.”

Appendix A — Product Layer Master Map

System class	Name	Key subcomponents	MVP?
Internal ontology	G-Taxonomy	Goal, Move, Context, Support, Environment	YES - foundational
Core engine	G-Intelligence	Profile/context, recommendation, adaptation, orchestration, explanation, safety	YES
Data context	Fitness Graph	History, preferences, performance, feedback, milestones, consented connections	YES - minimal
Consumer surface	G-Today	Daily next action, why, quick adapt, completion	YES
Consumer surface	G-Journey	Discovery, path, weekly plan, milestone, multi-journey later	YES - single journey
Consumer surface	G-Hub / Explore	Curated ecosystem discovery	Prototype / limited
Consumer surface	Fitness IQ	Progress + actionable insight	YES - basic
Consumer surface	Tanya Gerakasa	Intent/search/adjustment	Later / bounded MVP if cheap
Capability	G-Move	12 activity verticals	YES - Strength only
Capability	G-Wellness	Recovery, sleep, mobility, mindfulness, hydration/nutrition guidance	Later
Capability	G-Coach	Matching, review, consult, coaching	MVP-lite concierge
Capability	G-Access	Gym/studio/court/class booking	Later
Capability	G-Connect	Wearables & health data	Later
Capability	G-Community	Challenges, clubs, leaderboard, rewards	Later
Capability	G-Events	Discovery, registration, ticket, QR, organizer	Later
Capability	G-Market	Gear/apparel/supplement/digital product	Later
Professional	Gerakasa Pro	Coach/client OS + AI copilot	Later / pilot
Professional	Gerakasa Partner	Venue/event/merchant ops	Later
B2B	Gerakasa Business	Corporate wellness	Long-term

Appendix B — Evidence Snapshot / Competitor Sources

Accessed 27 August 2026. Public capabilities change; re-check before investor or public claims.

Appendix C — Glossary v1.0

Term	Working definition
Fitness Intelligence	Kemampuan sistem memahami context, mengubah data menjadi insight, lalu menentukan/rekomendasikan action yang relevan.
Journey Orchestration	Mengkoordinasikan goal, modality, schedule, support, recovery, dan services menjadi satu path.
G-Taxonomy	Ontology internal Gerakasa: Goal, Move, Context, Support, Environment.
G-Intelligence	Core decision and adaptation engine.
G-Today	Daily next-best-action experience.
G-Journey	Goal/path layer yang mengorganisasi perjalanan user.
Fitness Graph	Longitudinal, consent-aware context user across activities and services.
Fitness IQ	Consumer-facing progress/insight layer.
Capability layer	Fitur/service yang dipanggil oleh journey ketika relevan; bukan semuanya harus tampil di home.
Specialized journey	Journey untuk context berisiko/khusus yang memerlukan expert governance.

Term	Working definition
Horizontal proof	Bukti bahwa architecture bekerja pada lebih dari satu fitness vertical.

Appendix D — Revision Checklist Before Next PRD

- Update domain model: Profile, Journey, DailyAction, Activity/Workout, Feedback, Adaptation, FitnessIQ.
- Define G-Taxonomy schema and versioning.
- Define recommendation explanation and adaptation log.
- Create Strength MVP rules with Fitness Lead.
- Define safety and discomfort escalation.
- Design mobile IA: Today / Journey / Explore / Fitness IQ / Me.
- Decide native mobile vs responsive implementation plan based on technical cofounder capacity.
- Remove/park challenge-marketplace assumptions that are no longer the wedge.
- Create analytics event taxonomy around the learning loop.
- Publish founder decision memo that approves the new wedge before major feature development.
